What is Garcinia Cambogia?

The Miraculous Weight Loss Fruit

From news channels to celebrity doctors on famous talk shows, the topic of conversation is on Garcinia Cambogia. From the exotic jungles of Southeast Asia, local legend spoke about a magic fruit known as Garcinia Cambogia, sometimes called tamarind. Small and pumpkin shaped, observers noticed that the fruit was being eaten raw in its natural form or as a flavoring agent by what seemed to be the healthiest people.

But Why?

The makers of Nutriherbs Carcinia had a simple goal in mind. Uncover the secrets of this local legend and create the most effect weight loss supplement possible. Join millions of people from around the world to find out today what the media is buzzing about.

The Science Behind

Introducing Hydroxycitric Acid (HCA)

Why are scientists all over the world studying Carcinia Cambogia and the effects of HCA? What is science so curious about? Research is focused on HCA extract from Carcinia Cambogia as a weight loss aid in two powerful ways.

Helps Eliminate Fat

There is an enzyme in your body called Citrate Lyase that helps you turn your favorite snacks into fat. HCA aims to prevent this enzyme from producing more stored fat than you need. You could burn more tasty treats as fuel rather than store them.

Suppresses Appetite

Researchers are also encouraged by HCA's ability to increase serotonin levels - a key to suppressing appetite. Serotonin is a neurotransmitter in your brain that makes you feel good. By increasing serotonin levels, HCA improves mood and suppresses emotional eating during stressful times.
