Overview

Due to changes in customer demand, technology transformation is a much more compelling strategy than it once was in the power and utilities sector. Digital technologies are evolving, and customers are quick to adopt them. Both business and consumer energy users are clear about their expectations. They want to reduce their costs, and they know that technological controls and data analytics can help them do it.

Problem Statement

Global market forces require a new a utilities industry. Market forces, imposed around the world, requiring the transform models.

- New entrants and disruptive technologies
• Increased pressure on operational productivity
• Aging asset performance with increasing costs
• Increased customer support costs

Quirk Solution

The Utilities Industry must enabled by a new solution that is instrumented, interconnected, and intelligent to self service customer support.

Quirk provides a ready to deploy Chatbot with Utilities integration that provides answers to user queries instantaneously, through Web, SMS and Email. It can be accessed via any smart device, such as Apple Watch, Google Home, Amazon Echo etc.

Business Benefit

- End Customer Satisfaction
- Reduction of service calls volume
- Increase in employee productivity
- Cost savings in customer support
